## W MUNSON HEALTHCARE

## Outpatient Injections & Non-Stress Test Process for Maternity Nurses

Cerner PowerChart EDUCATION

## Process

An outpatient arrives for either a Rhogam or Betamethasone injection or Non-Stress Test:

Locate the patient on the preadmit patient list and open their chart.
 NOTE: Outpatients do not show up on the Tracking Board.

- From Nurse View on the dark menu, select the Triage/Ante/Labor Workflow tab and determine if a pregnancy has been added. If no pregnancy has been added, add the pregnancy.
  - a. For education on adding a pregnancy, see the Triage/Ante/Labor Workflow: Adding a Pregnancy education located on the Hospital

Maternity Nursing: Triage/Ante/Labor webpage.

- 3. Enter appropriate order for Rhogam, Betamethasone, or a Non-Stress Test in the Orders tab of the patient's chart.
- 4. For injections, administer the injection following the medication administration process.
- 5. For a Non-Stress Test, hook the patient up to the FetaLink monitor.
- From Interactive View on the dark menu, go to the OB Pregnancy Band.
  - Under OB Visit
    Assessment View,
    document the
    Reason for Visit
    and the associated
    information.
