

# Triage/Ante/Labor Workflow: Adding a Pregnancy for Maternity Nurses

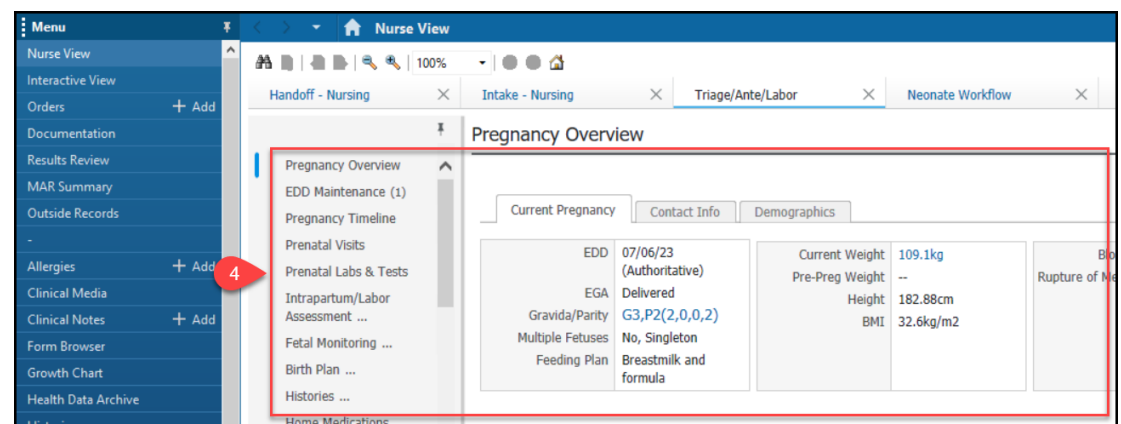

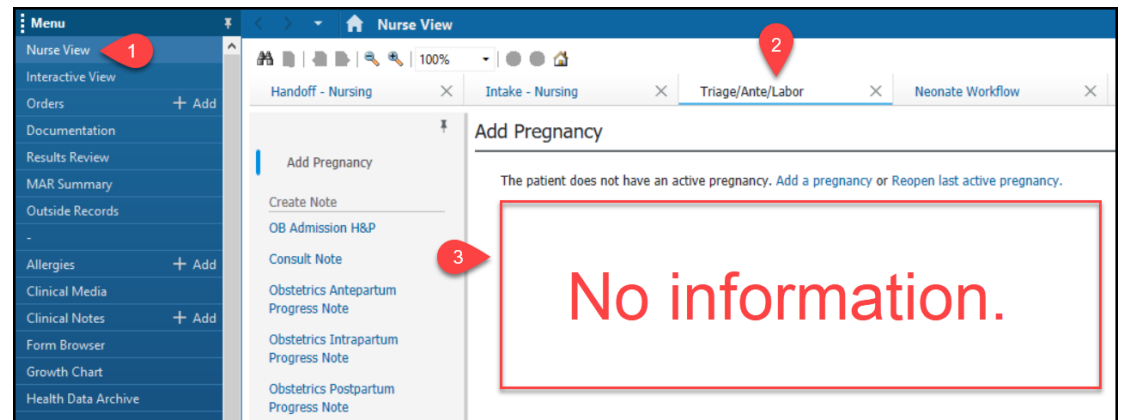

Cerner PowerChart EDUCATION

## Description

- Adding a pregnancy should be done at either of the following touch points;
  - During the maternity prepared stay process.
  - Outpatient visit (Rhogam, Betamethasone, or Non-Stress Test).
  - Triage.
  - When a patient is admitted.
- The nurse should ensure that a pregnancy was added to the chart prior to the start of any documentation.

## Has a pregnancy been added?

- From within the patient's chart, go to Nurse View on the dark Menu.
- Select the Triage/Ante/Labor Workflow
- If no information is displayed, a pregnancy has not been added.
- If a pregnancy has been added information will appear.

### Adding a Pregnancy

When no information appears in the Triage/Ante/Labor Workflow a pregnancy needs to be added. From the Triage/Ante/Labor Workflow select:

1. Add a Pregnancy hyperlink.

#### Add Pregnancy

The patient does not have an active pregnancy. [Add a pregnancy](#) or [Reopen last active pregnancy](#).

2. Complete Onset: Date field. Nurse can ask the patient the date. Often, the last menstrual period date is used.

**NOTE:** Do not fill out the Confirmation Method.

3. Change the number of gestations if the pregnancy includes twins or more.

4. Under EDD Maintenance select 'Unknown'.

5. Fill out the EDD date. Click the drop-down arrow to automatically fill out the date.

6. EGA will automatically populate.

7. Click OK.
