

# Tear Off Feature for Providers

## Using the Tear Off Feature

The Tear off feature is used to help increase efficiency for providers who want to view other areas of the patient's chart in multiple windows. This feature allows the provider to make comparisons, add orders, complete free text Components within the Workflow or a form, etc., while keeping important information in view on a different window. To use the Tear Off feature:

1. Open the patient's chart and click the **Tear Off** icon in the top toolbar.
2. The current page will be copied and appear as its own window that can be moved to another monitor if desired.

The screenshot displays the Cerner PowerChart interface for patient CERNED, ANGUS. The main window shows a 'Results Review' section with a 'Quick Results Flowsheet' and a 'Navigator' on the left. A red circle labeled '1' points to the 'Tear Off' icon in the top toolbar. A separate window titled 'CERNED, ANGUS - AT4173159 Provider View' is shown in the foreground, containing a 'Chief Complaint' section (Dizziness) and 'Documents (4)'. A red circle labeled '2' points to the 'Chief Complaint' section in this separate window. A red callout box with white text states: 'The current pages becomes a separate window. This window can be moved to another screen.'
