

## Fair Warning – Who Is Auditing Your Access to Munson’s Electronic Medical Record?

Munson has implemented a new auditing system called “Fair Warning,” as part of meeting the Meaningful Use requirement. Audits daily identify inappropriate access to Electronic Medical Records. Audits have **expanded** beyond Cerner (i.e. PowerChart) to include more systems, such as STAR, SunQuest, NextGen, and others. **Never** access any electronic medical record containing any medical information without a “job-related need to know.” Be certain that your manager would agree that it is job related. There are disciplinary consequences occurring to those who ignore this Fair Warning. The consequence can and sometimes does include termination.

Fair Warning is a powerful tool to help meet HIPAA Meaningful Use regulations for proactive audits. Don’t lose your job over inappropriate chart access.
