

COVID-19: How to Build Community Immunity

1 important tool

2 doses, three to four weeks apart

7-14 days after second dose, personal protective antibodies develop

70% of community vaccinated = community "herd" immunity

Until community immunity is reached, continue to use all of your tools to help **slow the spread**.

Physically distance from people outside your household.

Wash your hands frequently with soap and water (20 seconds does the trick).

Mask up when you're out in public.

Follow your doctor's advice and get recommended appointments, screenings, and treatments to help keep yourself healthy.
