340B

The federal 340B Drug Pricing Program allows qualifying hospitals and clinics that treat low-income and uninsured patients to buy outpatient prescription drugs at a discount of 25 percent to 50 percent. The National Drug Code (NDC) needs to be documented correctly on all medications administered to ensure proper accounting for 340B drugs.

Location of NDC

The areas circled in red on the two labels shown are examples of where to find the NDC on a package or vial and what it looks like. ADD 5323-199-09 50 156 HEPARIN SODIUM INJECTION, USP 10,000 USP Units/mL For IV or SC Use Rx only (Derived from Porcine Intestinal Mucosa) Warning: Contains Benzyl Alcobol 4 mL Multiple Dose Vial NOT for Lock Flush

Documentation of NDC

An accurate NDC is necessary for accurate charges and to capture the 340B drug savings discount. NDC numbers are in an 11-digit format. The format is in a series of 5-4-2 numbers. It never contains letters. If the NDC is missing a digit, substitute a zero in its place, for example, 0002-7597-01 should be corrected to 00002-7597-01, or 50274-040-62 corrected to 50274-0040-62.

The series of numbers on an NDC label identifies:

- The labeler (the company that manufactures or distributes the drug)
- The product code (specific strength, dosage form, and formulation of the drug)
- The package size and type

The NDC label example to the right is documented as 00777-3105-02
