

Hierarchical Condition Categories for Providers and Clinical Staff

Cerner PowerChart Ambulatory EDUCATION

Summary: When a chronic condition is added to the Workflow Problem List component, the condition is mapped to an ICD-10-CM code to determine whether the condition qualifies as hierarchical condition category (HCC). As such, the Problem List will have black or red lettering appear. All primary care offices (clinical or provider staff) must address HCCs as part of their workflow. Specialists' offices will see this information as well but are not expected to address at this time.

Hierarchical Condition Category Indicators

If a diagnosis is an HCC condition, the Workflow Problem List component displays an HCC indicator in parentheses next to the problem. If the condition was added to an encounter in the previous or current calendar year and has been addressed in the current calendar year, the condition is considered validated. This is indicated with a **black** HCC indicator next to the condition name.

Problem Name
(HCC) Diabetes

A **red** HCC indicator is displayed if the condition was added to an encounter in the previous calendar year but has not been addressed in the current calendar year. A message also is displayed on the Information banner when overdue HCCs require attention.

Problem Name
(HCC) Afib

Problem List

i Information. Overdue HCC problems require attention.

Classification: Medical and Patient Sta

Priority	Problem Name	Classification	Actions
	(HCC) COPD mixed type		<input type="checkbox"/> This Visit <input checked="" type="checkbox"/> Chronic Resolve
	Hyper reflexia		<input type="checkbox"/> This Visit <input checked="" type="checkbox"/> Chronic Resolve
	Mixed hyperlipidemia		<input type="checkbox"/> This Visit <input checked="" type="checkbox"/> Chronic Resolve
	Sys hypertension		<input type="checkbox"/> This Visit <input checked="" type="checkbox"/> Chronic Resolve

Condition Type	Last Addressed Date and Time	HCC Indicator Color
Chronic Problem (Active)	Within the calendar year	Black
Chronic Problem (Active)	Outside of the calendar year	Red
Chronic Problem (Active)	Not available	Red
Chronic Problem (Resolved and Inactive)	Not available	Black
This Visit Diagnosis (Active)	Within the calendar year	Black
This Visit Diagnosis (Historical)	Outside of the calendar year	Black

Updating an Overdue HCC

1. From the Problem List:

a. Click **This Visit**.

i. The button changes color and displays a check mark, and the HCC indicator changes from red to black.

Priority	Problem Name	Code	Onset	Classification	Actions
1	(HCC) COPD mixed type	J44.9 (ICD-10-CM)	--	Medical	<input checked="" type="checkbox"/> This Visit <input checked="" type="checkbox"/> Chronic Resolve

b. At the next visit, addressed problems will be viewable in the Diagnosis Insight component.
